

## Ave. J-4 & 15th. St. W. Booster Pump

The project consists of constructing a new booster pump station in Lancaster. The purpose of this project is to replace an existing pump station that is aging and becoming less efficient. The project will include three vertical turbine booster pumps, new electrical controls and a new concrete masonry block pump house. This project has started construction in August 2008 and be completed by June 2009.
